Visit type	Annual physical examination

Vitals

Measure	Result	Note
Blood pressure	128/78 mmHg	Controlled on medication
Heart rate	64 bpm	Regular
Height	6 ft 1 in	
Weight	225 lb	BMI 29.7
Temperature	98.4 F	

Assessment and Plan

- Hypertension, controlled. Continue metoprolol succinate ER 50 mg once daily. Blood pressure at goal today.
 - Hyperlipidemia, mild. LDL slightly elevated at 138. Start over the counter fish oil 1000 mg daily and add fish to the diet twice weekly. Recheck lipids at next visit. Holding on a statin for now given good blood pressure and active lifestyle.
 - Osteoarthritis, bilateral knees, status post arthroscopy (right 2016, left 2019), and chronic right rotator cuff strain. Stable. Continue ibuprofen as needed, ice after activity. No new imaging indicated.
 - Weight management. Discussed a goal of losing 20 pounds over the next year. Patient walks 2 to 3 miles daily, encouraged to continue. Reviewed diet, patient grills lean proteins and is adding fish.
- Health maintenance: colon cancer screening up to date. Next annual physical due January 2027. Labs drawn today, results sent separately.

Electronically signed by Susan Albrecht, MD on January 9, 2026.
