Northfield College of Health Sciences | Clinical Laboratory | (612) 555-0210

Laboratory Report

Patient	Brandon Wright
Date of Birth	12/14/2003 (Age 22)
Patient ID	SHC-88241
Ordering Provider	Amy Sorensen, MD
Specimen Collected	January 8, 2026, 8:15 AM
Reported	January 9, 2026
Test Panel	Iron Studies and CBC

Results

Analyte	Result	Flag	Reference Range	Units
Hemoglobin	14.2		13.5 to 17.5	g/dL
Hematocrit	42.0		41 to 50	%
Ferritin	24	LOW	30 to 400	ng/mL
Serum Iron	62	LOW	65 to 175	mcg/dL
Total Iron Binding Capacity	410	HIGH	250 to 400	mcg/dL
Transferrin Saturation	15	LOW	20 to 50	%
Mean Corpuscular Volume	84		80 to 100	fL

Provider Comments

Ferritin and transferrin saturation remain at the low end with mildly elevated TIBC, consistent with the iron-deficiency tendency common in high-volume endurance athletes. Hemoglobin remains normal, so this is depletion without anemia. Continue ferrous sulfate 325 mg by mouth daily, taken with vitamin C and away from coffee. Recheck iron studies in 6 months. Maintain iron-rich intake during heavy training blocks.
