After-Visit Summary

Patient	Danny Patrick Wells
Date of Birth	October 12, 1986 (39 yrs)
MRN	GSN-100482
Date of Visit	February 10, 2026
Provider	Angela Ferraro, MD, Neurology
Reason for Visit	Chronic migraine, scheduled 4-month follow-up

Vitals

BP	Pulse	Weight	Height	BMI
122/78 mmHg	64 bpm	178 lb	5 ft 11 in	24.8

Assessment

Chronic migraine with aura, diagnosed 2018. Patient reports an average of 2 to 3 headache days per month over the past interval, stable from the prior visit. Episodes lasting 12 to 24 hours continue to require a dark, quiet environment and antiemetic support. Identified triggers remain sleep disruption, stress, barometric pressure changes, aged cheese, processed meats and nitrates, red wine, and dehydration.

Current Medications

Medication	Dose	Directions
Topiramate	50 mg	One tablet by mouth nightly (preventive)
Sumatriptan	50 mg	One tablet at migraine onset, may repeat once after 2 hrs (PRN)
Magnesium glycinate	400 mg	Nightly
CoQ10	200 mg	Daily
Vitamin D3	2000 IU	Daily

Plan

- Continue topiramate 50 mg nightly as preventive therapy.
- Maintain headache diary; bring frequency and trigger log to next visit.
- If migraine frequency rises above 4 days per month before the next visit, we will transition the preventive to a CGRP inhibitor (erenumab/Aimovig discussed in detail, including monthly auto-injector administration and insurance prior authorization).
- Reinforce sleep hygiene, consistent hydration, and trigger avoidance.
- No new labs or imaging indicated at this time.

Next appointment: Tuesday, October 13, 2026 at 9:15 AM with Dr. Ferraro.

Electronically signed by Angela Ferraro, MD on 02/10/2026.
