IT HELP DESK

PROCEDURES AND STANDARDS REFERENCE

For Student Technical Support Staff

Version 2.1 | Last revised: August 2025

SECTION 1: SCOPE AND PURPOSE

This document describes standard operating procedures for student workers at the Lakeview University IT Help Desk. All staff are expected to follow these procedures consistently. Questions should be directed to the Help Desk supervisor or the IT Operations Manager.

SECTION 2: TICKET HANDLING

2.1 Opening a Ticket

Every request must have a ticket created in the ServiceDesk system before work begins, even if the fix is immediate. Do not begin any work without a ticket open.

Required fields when opening a ticket:

- Requestor name, affiliation (student / faculty / staff), and contact info
- Location of the issue (building, room, or device identifier)
- **Category:** Account Access, Hardware, Software, Network, or Other
- Brief description of the reported issue (one to two sentences)

2.2 Ticket Categories

- **Account Access:** Portal login issues, email access, password resets, permissions, account provisioning
- **Hardware:** Physical devices (computers, printers, monitors, peripherals), cables, projectors
- **Software:** Application installation, configuration, compatibility issues, licensing
- **Network:** Wired or wireless connectivity issues, VPN, port problems
- **Other:** Anything that does not fit the above; add a note explaining why

2.3 Working a Ticket

Document each step taken in the ticket notes as you go. If you ask the user

a question, note the question and their response. If you try something and it does not work, note that too.

2.4 Closing a Ticket

Before closing:

- Confirm with the user (in person or by reply) that the issue is resolved
- Add a resolution summary to the ticket notes (one to three sentences)
- Set the correct resolution category
- If the user is unavailable, note the action taken and close as "Resolved - Unconfirmed"

2.5 Escalation

Escalate to the senior IT staff or system administrators when:

- The issue requires elevated system or admin access beyond your credentials
- The issue involves a security incident (suspected breach, malware, phishing)
- You have attempted resolution twice and the issue persists
- The issue affects a server, a network switch, or shared infrastructure

Always notify your supervisor verbally or by email when escalating.

Do not attempt fixes outside your access level.

SECTION 3: HARDWARE PROCEDURES

3.1 Peripheral Replacement

Keyboards, mice, cables, and adapters may be swapped from the spare inventory cabinet in the Help Desk back room. Log each item removed from inventory in the inventory sheet on the clipboard. Retrieve a matching replacement from the supply room within 48 hours if the stock runs below three units.

3.2 Monitor and Projector Issues

Check cable connections first (DisplayPort, HDMI, VGA). If the cable is fine, test with a known-working spare cable. If the issue persists, check driver status on the connected computer. Projector bulb replacements are stored in the cabinet labeled Projector Supplies. Log the replacement date on the unit's service card.

3.3 Printer Jams and Service

For paper jams, follow the manufacturer's clear procedure posted on each printer. Do not force stuck paper. If a jam cannot be cleared in two attempts, tag the printer as Out of Service and notify the supervisor.

Routine maintenance (feed roller replacement, drum cleaning) is performed by the IT Operations staff on a quarterly schedule. Flag for maintenance if a printer has jammed more than twice in a single week.

3.4 Loaner Equipment

Laptop charger loaners and USB adapter loaners are available for up to seven days. Log all loaners in the loaner sheet. Follow up with the borrower

at day five if the item has not been returned.

SECTION 4: ACCOUNT AND ACCESS PROCEDURES

4.1 Password Resets

Use the Google Workspace Admin Console to reset passwords for student and faculty accounts. Verify identity by asking for the Lakeview ID and the last four digits of their student or employee ID before making any account changes. Do not reset passwords over the phone without two-factor identity verification.

4.2 New Account Provisioning

New student accounts are provisioned automatically by the registrar's system. If a student reports that their account was not created after enrollment, submit a provisioning request to the system admin team via the escalation queue.

4.3 Access and Permissions

Requests for access to restricted servers, research drives, or elevated permissions must be forwarded to the system admin team. Help Desk staff do not grant access to restricted resources. Document the request and the referral in the ticket.

SECTION 5: CONDUCT AND PROFESSIONALISM

- Greet every user politely and acknowledge the frustration that comes with technical problems.
- Do not talk down to users or use jargon without explaining it.
- If you do not know the answer, say so. Find out, or refer the user to someone who does. Guessing and being wrong is worse than admitting uncertainty.
- Do not access any account or device beyond what is necessary to resolve the reported issue.
- Protect user privacy. Do not discuss ticket details with other users.
- If a user becomes hostile, remain professional, disengage if needed, and notify your supervisor.

SECTION 6: SAFETY AND SECURITY

- Report any suspected phishing emails or suspicious login attempts to the IT Security team immediately at itsecurity@lakeviewu.edu.
- Do not open attachments from unknown sources on university machines.
- If you observe a physical security issue (unlocked server room, suspicious person in a restricted area), notify campus security at (773) 555-0911.

Questions about these procedures? Contact the Help Desk Supervisor.
