Confidential Clinical Summary

For Patient Use Only

Patient:

Eric Isabel Lambert

Student ID:

LU20240847

Date of Birth:

October 14, 2005

Clinician:

Dr. Maria Espinoza, LPC

Session Format:

Individual therapy, biweekly

Period Covered:

February 2026 through February 2026

This summary is prepared for the patient's personal records and for continuity of care. It is not a formal diagnostic document.

PRESENTING CONCERNS

Eric initially presented in February 2025 with concerns related to academic performance anxiety, first-generation student stressors, and difficulty managing periods of low motivation and rumination. A formal assessment resulted in a diagnosis of Generalized Anxiety Disorder (GAD) in February 2025. He has been seen biweekly since that time.

Current concerns as of the Spring 2026 period include:

- Managing academic pressure during a demanding semester (two course retakes plus two new courses simultaneously)
- Navigating a developing serious relationship
- Continued first-generation identity stress

- IBS symptoms that are partially stress-triggered (managed by Dr. Amy Chen at Student Health; no clinical overlap required at this time)

CURRENT MEDICATIONS

Sertraline 50mg, daily each morning

Prescribed by Dr. Amy Chen, Lakeview Student Health Center

Last reviewed:

October 2025 (quarterly schedule maintained)

Patient reports sertraline has been effective with no notable side effects

TREATMENT APPROACH

Cognitive Behavioral Therapy (CBT) with adaptations for anxiety management.

Primary techniques in use:

- Thought record and cognitive restructuring (naming, examining, reframing

Page 1

catastrophic thoughts)

- Behavioral activation during low-motivation periods
- Sleep hygiene and routine reinforcement
- Exposure-based strategies for academic anxiety (studying despite uncertainty rather than avoiding)

SESSION THEMES - FEBRUARY 2026

Focus:

Exam anxiety cycle and cognitive restructuring introduction.

Patient demonstrated good engagement with the thought record exercise during the second session. Initial application showed some difficulty separating evidence from emotional reasoning, which is expected at this stage. Recommended daily log (brief) to track thought patterns between

sessions.

CLINICAL OBSERVATIONS

Eric presents as intellectually engaged, self-aware, and motivated. He

Page 2

responds well to practical, concrete frameworks. Abstract validation without practical tools is less effective for him. He has a good sense of humor about his own patterns, which aids the therapeutic process.

Strength:

Strong support network including partner Mateo, roommate Priya,

Page 2

and consistent family contact.

Area to monitor:

Tendency to defer self-care during academic peak periods

(sleep, exercise, medication consistency).

CURRENT PLAN

Continue biweekly sessions through the academic year.

Next formal review:

October 2026 at start of fall semester.

Refer to Dr. Chen for any medication adjustments.

No changes to treatment approach recommended at this time.
