

Greenleaf Orthopedic Associates

After Visit Summary

Patient: Brandon Kelly

Date of Birth: February 9, 1969

Record No.: GOA-44712

Visit Date: January 14, 2026

Provider: Dr. A. Ramos, Orthopedic Surgery

Reason for visit

Right knee pain, ongoing for more than a year, worse with stairs, kneeling, and a full day on the job. Here to discuss surgical options.

Assessment

Advanced osteoarthritis of the right knee, confirmed on imaging. Conservative measures have reached their limit. The patient is a good candidate for a total knee replacement.

Plan

- Total knee replacement, right side, scheduled for November 12, 2026.
- Pre operative medical clearance with primary care, Dr. Patricia Wynn, in late October 2026.
- Continue lisinopril 10 mg daily for blood pressure.
- Stop ibuprofen and other anti inflammatory medication seven days before surgery.
- Physical therapy will begin the day after surgery. A walker will be needed for the first weeks.
- Arrange help at home for the first two weeks. No driving until cleared.

Follow up

Pre operative visit in late October. Call the office with any questions before then.
