Complete blood count and iron studies

Annual monitoring, history of mild iron deficiency

Analyte	Result	Reference Range	Flag
Hemoglobin	14.2 g/dL	13.5 to 17.5	Normal
Hematocrit	42.1 %	41 to 50	Normal
Ferritin	28 ng/mL	30 to 400	Low
Serum iron	68 mcg/dL	65 to 175	Normal
TIBC	395 mcg/dL	250 to 450	Normal
Transferrin saturation	17 %	20 to 50	Low

Provider note

Ferritin and transferrin saturation remain at the low end, consistent with your history and your training load. Continue the daily ferrous sulfate 325 mg with breakfast and pair it with a source of vitamin C. We will recheck at your annual physical. Keep an eye on energy on high mileage weeks and call if fatigue climbs.
