

618 South Kline Street, Aberdeen, SD 57401 | (605) 555-0182 | gary.pittman@greenridertech.co

Thank you for coming in today. This summary reviews what we discussed, your current medications, and the plan going forward. Please keep it with your records and call the clinic if anything changes before your next visit.

Visit Details

Patient	Gary Pittman
Provider	Dr. Robert Strand, primary care
Facility	Avera St. Luke's, Aberdeen
Reason for visit	Routine COPD follow up and blood pressure check

Assessment

Your COPD remains mild to moderate and stable since the last visit. Lungs were clear of any new findings on exam, and your oxygen level was within a normal range at rest. Blood pressure was well controlled today. There are no signs of a flare, and your daily walking continues to help your breathing and your overall stamina.

Current Medications

Medication	Purpose	Instructions
Tiotropium inhaler	COPD maintenance	One inhalation each morning
Albuterol inhaler	Rescue	As needed for shortness of breath
Lisinopril 10 mg	Blood pressure	One tablet daily
Acetaminophen	Joint pain	As needed, within daily limit
Vitamin D	General health	One tablet daily

Plan and Lifestyle

Continue the maintenance inhaler every morning and keep the rescue inhaler nearby, especially on cold days and during exertion, when symptoms are most likely to flare. Keep up the daily walks of twenty to thirty minutes as the weather allows. Watch sodium intake to help keep blood pressure in range. Stay current on the flu and pneumonia vaccines.

Your next pulmonary function test with Dr. Christine Agard is scheduled for November 2026. Call the clinic sooner with any increase in cough, shortness of breath, or chest tightness.
