FEBRUARY AVERAGE: 133.0 mg/dL

FEBRUARY HIGH: 145 (February 14)

FEBRUARY LOW: 127 (February 12 and February 25)

**DAYS WITHIN TARGET (80-130): 12**

---

#### COMBINED SUMMARY: JANUARY 1 to FEBRUARY 28, 2026

---

Overall Average: 135.8 mg/dL

Overall High: 152 mg/dL (January 9, cold snap, walk skipped)

Overall Low: 127 mg/dL (February 12 and February 25)

Days within Dr. Chambers' target of 80-130: 19 of 59 days

Trend: Improvement across February compared to January. Dietary changes beginning to show effect. Walking consistency is the clearest correlating factor. Days without walking correlate to next-morning readings above 140.

Note to self: Bring this log to next appointment with Dr. Chambers. Ask about the February average and whether the trend is enough to hold on insulin decision.
