LDL	138 mg per dL	Below 130	High
HDL	44 mg per dL	Above 40	Normal
Triglycerides	162 mg per dL	Below 150	Borderline
Fasting glucose	94 mg per dL	70 to 99	Normal
A1c	5.4 percent	Below 5.7	Normal

Assessment and Plan

Assessment

Patient is a 45 year old man in good general health, physically active through his work as an HVAC technician. He reports chronic right shoulder pain consistent with rotator cuff strain, managed conservatively, and frequent use of over the counter ibuprofen. Lower back stiffness is noted and is mechanical in nature.

Plan

- Borderline high cholesterol. Recommend dietary change, more vegetables and lean protein, and less fried food. Recheck lipids at the next annual visit. No statin at this time.
- Right shoulder. Continue conservative care. Limit ibuprofen to label dosing and consider physical therapy. Refer to orthopedics if symptoms worsen.
- Routine labs are otherwise within range. Blood pressure is well controlled without medication.

Health Maintenance

Item	Status	Next due
Annual physical	Completed Aug 2025	October 2026
Lipid panel	Repeat at next visit	October 2026
Influenza vaccine	Declined today, plans pharmacy	Fall 2025
Blood pressure check	Normal	Routine

The front desk will send a reminder when the next annual physical is due. Patient declined the influenza vaccine today and plans to get it at the pharmacy in the fall.
