

Emergency Medicine CME - Conference Notes

Regional emergency medicine update attended November 2026. Notes for my own practice and for the precepting blocks. CME hours logged separately.

Sessions Worth Keeping

- Acute coronary syndromes: reinforced the early-EKG message; useful directly for our triage protocol.
- Sepsis recognition at triage: time-to-antibiotics bundle refresher.
- Procedural sedation safety: monitoring and rescue airway readiness.
- Back pain red flags: relevant personally and clinically.

Takeaways For The Department

- Bring the early-EKG framing into the November nursing in-service.
- Share the sepsis bundle refresher with the two precepting students.
- Nothing here changes a locked protocol value; cross-check before quoting.
