Subject Repeat genotyping done, and Ibadan

Layla,

Good news. The six repeat *Dioscorea alata* accessions amplified cleanly on the second run, so we now have the full set of 48. I have pushed the cleaned genotype matrix to the shared Drive folder under Yam2026. Can you start the methods draft this week so we keep momentum before the field season?

Also, I booked my Nairobi to Lagos leg for October. I land on the 11th. Are you still planning to come in from Enugu on the 12th? It would be good to have an evening to go over the results before the main meeting.

Amina

Amina,

That is a relief about the six. I have the file and will start the methods section this weekend, draft to you by the middle of next week. The phenotype data is clean on my end.

Yes, I come in from Enugu on the 12th. An evening to pre read the results before the secretariat meeting is exactly what I want, otherwise we spend the first hour catching up instead of deciding things. I will confirm the itinerary nearer the time. Derek will hold the lab here.

Layla
