

Projet Mobilité Plateau

Consultation portal engagement snapshot

Export date 2026-10-06

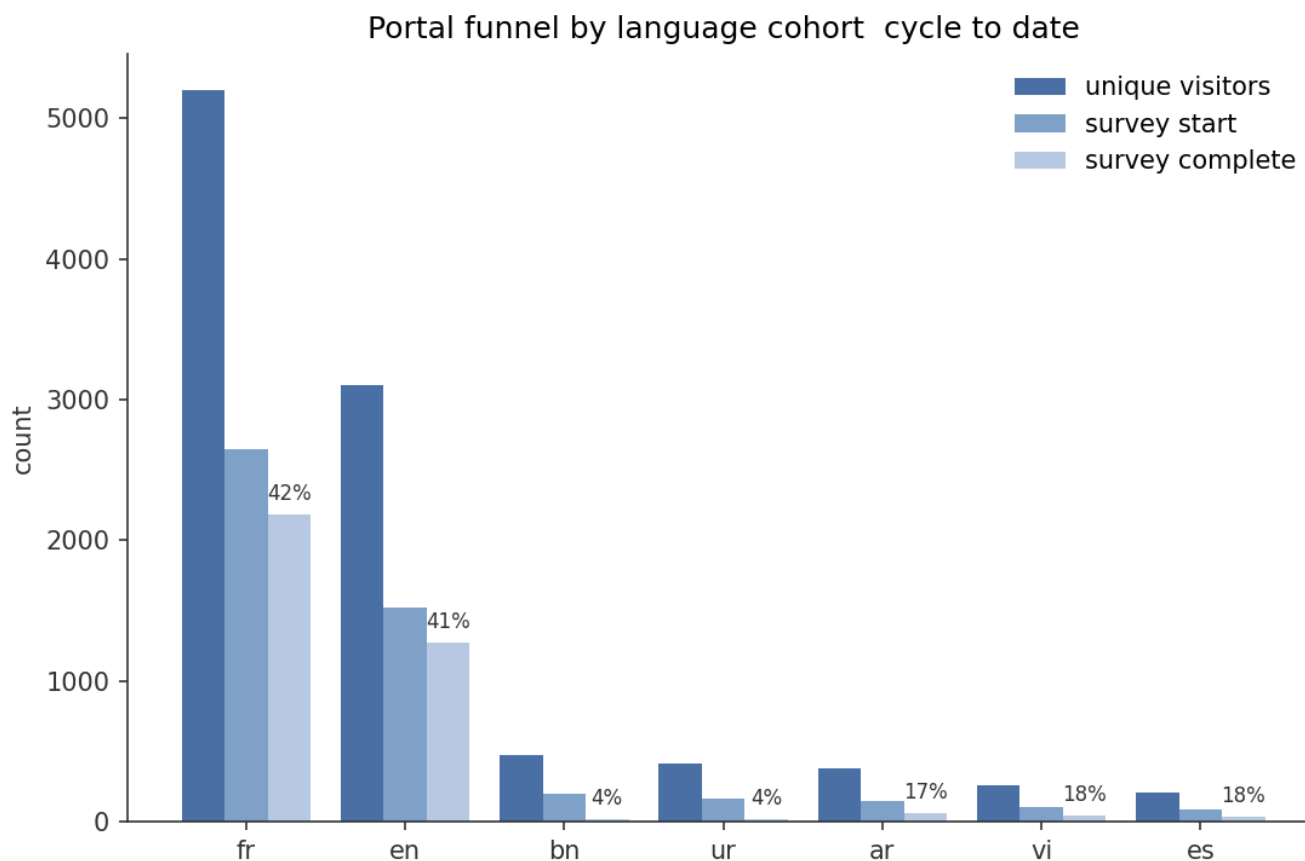

Prepared for internal review by Ruth Armstrong, Urbaniste principale

Workspace Service de l'urbanisme et de la mobilité, Ville de Montréal

This snapshot reports the engagement funnel, daily session trend, ward level engagement heat, and top concerns as observed on the consultation portal. Numbers are portal side raw counts. Reach adequacy is subject to the cross reference with the messaging delivery ledger.

Funnel by language cohort

The funnel view compares unique visitors, survey starts, and survey completes across the seven language cohorts on the consultation portal for the cycle to date.

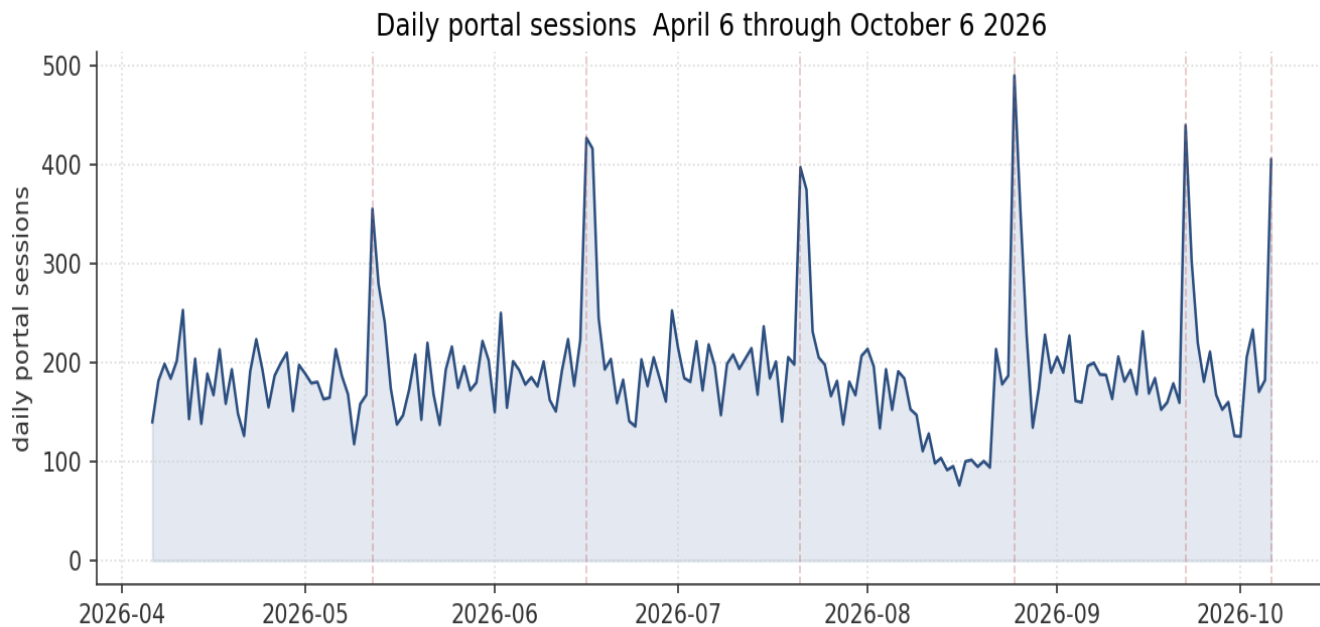

Source consultation portal analytics

Reading note. French and English cohorts converge on completion in the 42 percent range. Bengali and Urdu cohorts show a large drop between start and complete with completion rates in the 4 to 5 percent range. The gap is consistent across the two cohorts and is not a portal side issue in isolation. It should be read against the delivery ledger before publication.

Daily portal sessions

The time series shows daily portal sessions from cycle open on April 6 2026 through October 6 2026. Peaks align with community meeting dates. The mid August dip corresponds to the standard summer break window.

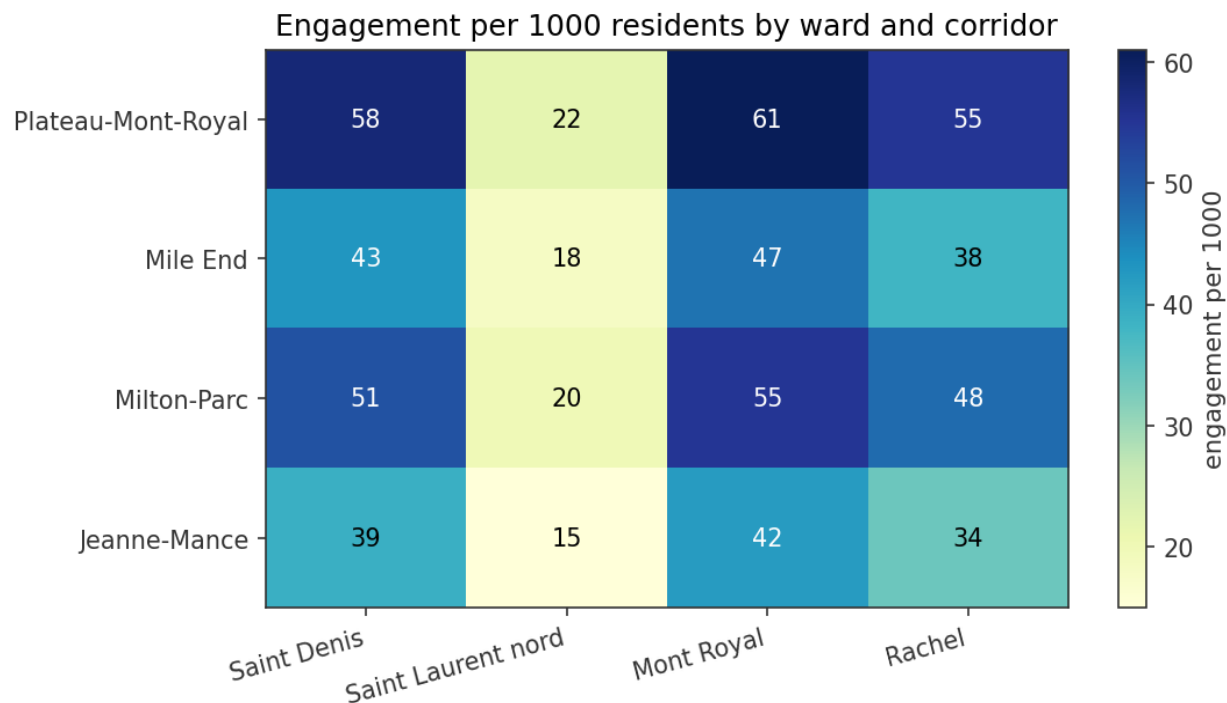

Source consultation portal analytics

Reading note. Peaks are consistent with community meeting outreach pushes. The mid August dip is expected and stabilises by the September 22 meeting window. October cadence is steady into the final consultation week.

Ward level engagement heat

The heat table shows engagement per 1000 residents by ward and corridor. Values combine unique portal visitors and survey completes normalised against the census 2021 borough resident count.

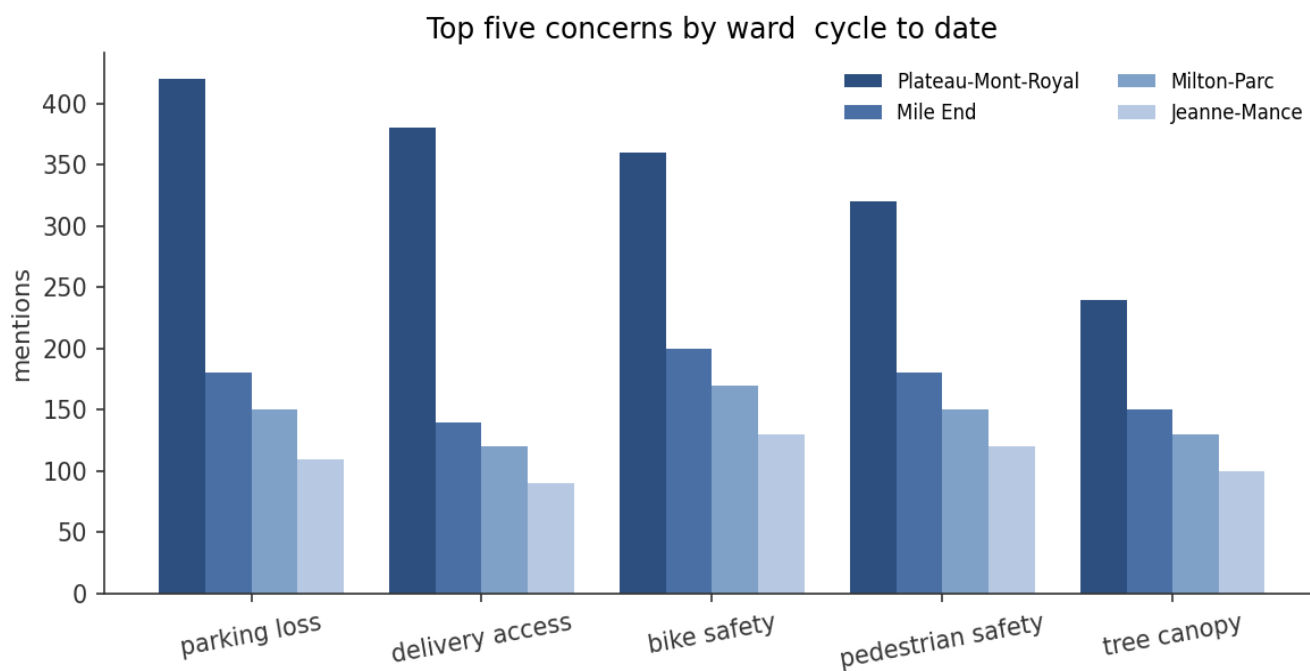

Source consultation portal analytics

Reading note. The Saint Laurent nord row is visibly cooler than the other corridors across every ward. This is the corridor where language cohort under reach is most likely to be affecting the top line count.

Top five concerns by ward

The bar view shows the top five concern categories as reported on the portal survey, split by ward.

Source consultation portal analytics

Ward	top concern one	top concern two	top concern three
Plateau-Mont-Royal	parking loss	delivery access	bike safety
Mile End	bike safety	pedestrian safety	tree canopy
Milton-Parc	pedestrian safety	bike safety	tree canopy
Jeanne-Mance	bike safety	pedestrian safety	parking loss

Reading note. Parking loss dominates Plateau Mont Royal. Bike safety leads in the other three wards. Concerns are consistent with the corridor mix in the response body.
