After Visit Summary

Patient:	Teresa Gutierrez
Date of birth:	02/14/1988
Visit date:	February 10, 2026
Provider:	Elaine Kimball, MD
Reason for visit:	Follow up, Meniere disease, left ear

Assessment

Left ear Meniere disease, stable. Episodes of vertigo with tinnitus and fluctuating hearing, one to two per month, lasting twenty minutes to two hours. Most recent significant episode was at work in early February and resolved with rest. Audiometry today shows a mild low frequency loss on the left, unchanged from the prior visit.

Plan

1. Continue betahistine 16 mg by mouth three times daily.
2. Continue meclizine 25 mg as needed for acute vertigo. Carry one in the work bag.
3. Maintain a low sodium diet, target under 2,000 mg per day. Limit caffeine after noon.
4. Continue the home vestibular exercises provided.
5. Return in nine months, sooner if episodes increase in frequency or severity.

Next Appointment

November 17, 2026 at 2:30 PM with Elaine Kimball, MD. Plan to take the afternoon off work.
