TOTAL BILLED TO INSURANCE: \$214.00

TOTAL PAID BY BCBS: \$214.00

PATIENT BALANCE: \$0.00

CLINICAL NOTES (Dr. Korvelas)

Mr. Garcia presented for his semi-annual preventive care appointment. He is seen every six months consistently, which reflects good compliance with his preventive regimen.

Gingival Health: Gingiva generally pink and firm. Slight localized bleeding on probing in the posterior mandible (lower left molar region), consistent with areas where calculus had accumulated. No probing depths beyond 3mm on today's assessment. No recession of concern.

Calculus: Moderate supragingival calculus present on lower lingual surfaces (common finding in adult males, especially those who consume significant quantities of coffee). Full-mouth calculus removal completed by Sandy with ultrasonic and hand instruments.

Patient noted he drinks two to three cups of Greek coffee daily, which accounts for the staining pattern observed.

Caries: No new caries detected on bitewing radiographs. Existing amalgam restorations (UR-3 premolar and LR-6 molar) remain stable. No sensitivity reported.

Oral Cancer Screening: Performed by Dr. Korvelas. No suspicious lesions detected on soft tissue examination of lips, tongue, floor of mouth, palate, buccal mucosa, or oropharynx.

Occlusion: No notable changes in occlusal wear.

Patient Education: Reinforced interdental cleaning - patient acknowledges that flossing frequency falls off during busy restaurant seasons. Encouraged use of a water flosser as an alternative given schedule constraints. Instructed on proper technique for posterior areas.

NEXT APPOINTMENT

Scheduled: October 27, 2026 t 2:00 PM

Adult Prophylaxis and Full Mouth X-rays (annual set due at this visit)
Reminder will be sent 2 weeks prior.

Note: If patient experiences tooth sensitivity, pain, or swelling before the next scheduled appointment, please call (727) 938-4820 immediately.
