

Chesapeake Institute of Public Health

Annual Performance Review and Development Plan

Review Period: July 1, 2024 to June 30, 2025 | Review Type: Annual

Employee:	Gerald Marie Roman, PhD, MPH
Employee ID:	EMP-2022-0441
Title:	Research Scientist, Division of Infectious Disease Epidemiology
Reviewing Supervisor:	Eleanor L. Voss, ScD, Senior Research Director
Review Date:	July 15, 2025
Overall Performance Rating:	Exceeds Expectations

1. Research Output and Quality

Rating: Exceeds Expectations

Dr. Roman completed the second full year of URISN data collection on schedule, achieving a 91% follow-up retention rate that substantially exceeds our anticipated benchmark of 75%. The quality of URISN data infrastructure she has built, including the Airtable-based participant tracking system, the Confluence protocol library, and the GitHub analysis codebase, reflects a level of methodological rigor that will benefit the project into Year 3. She published one first-author manuscript to the Journal of Urban Health in the review period (Roman et al., 2024, accepted April 2024) and has a second first-author manuscript in late-stage preparation targeting Journal of Urban Health Equity. She presented URISN findings at two regional conferences and contributed data analysis support to two co-authored studies. Six peer-reviewed publications total over her career at CIPH.

2. Grant Management

Rating: Meets Expectations

Year 2 grant reporting to the Meridian Foundation has been completed on time and at the required level of detail. Dr. Roman successfully managed the Year 2 budget within 2% of the approved line items, which is within acceptable variance. Year 3 renewal preparation is underway and on track for the November 2026 deadline. I would encourage Dr. Roman to develop more fluency in the administrative components of grant management, particularly around budget narrative writing, in preparation for eventually leading an independent grant application.

3. Mentorship and Team Leadership

Rating: Exceeds Expectations

Dr. Roman has demonstrated exceptional investment in the professional development of the URISN research assistants, Yemi Adeyemi and Sarah Kim. Both have grown substantially in their research skills under her guidance. She also provides informal mentorship to a Kensington University doctoral student and submitted a fellowship recommendation letter on that student's behalf. Her expectations of team members are high but fair, and the team's morale and output quality reflect her leadership approach well.

4. Community Engagement and Dissemination

Rating: Exceeds Expectations

Dr. Roman has distributed four community-facing URISN data reports to neighborhood organizations across the six study sites, in plain-language format appropriate for non-specialist audiences. She presented at the Baltimore City Health Department's respiratory illness surveillance roundtable in February 2025 and participated as an invited speaker at the Baltimore Community Foundation's health equity forum in November 2024. Her commitment to making surveillance data accessible to the communities it describes is genuinely noteworthy.

5. Professional Development

Rating: Meets Expectations

Dr. Roman completed the CIPH grant writing skills workshop in February 2025. She reviewed manuscripts for two journals during the review period (American Journal of Public Health; Epidemiology and Community Health). She is registered for the National Conference of Epidemiologists in October 2026. Recommendation: identify a statistical methods short course or workshop to build depth in longitudinal analysis methods prior to the Year 3 URISN longitudinal analysis.

Development Goals for 2025-2026

- Submit URISN Year 3 grant renewal application by November 9, 2026.
- Submit and achieve acceptance of the housing quality and respiratory illness manuscript.
- Present at the National Conference of Epidemiologists in Chicago in October 2026.
- Complete a longitudinal analysis methods course or workshop (self-identified target: online EPID courses or ENAR short course).
- Identify and begin drafting an independent R01-equivalent grant application in preparation for future submission.
