Assessment and Plan

1. Right knee, post arthroscopic repair 2019 (torn meniscus, work injury). Aching after long days on ladders and in attics. Continue OTC naproxen 220mg daily during work season and daily glucosamine. No new imaging needed unless symptoms worsen. Discussed knee bracing for attic work.
2. Lower back, intermittent occupational strain. Reviewed stretching routine. No radicular symptoms. Conservative management.
3. Alcohol use. Patient reports two to three beers on weeknights. Counseled on reduction. Liver panel within normal limits.
4. Sleep. Reports waking around 4 AM some nights. Discussed sleep hygiene. No medication started.

Labs: Lipid panel and CMP within normal limits. A1C 5.4.

Follow up: Annual physical, November 2026. Call the office for any new knee locking or giving way.
