

IRB Study Protocol - Culturally Adapted Dietary Interventions

Study Title

Effectiveness of Culturally Adapted Dietary Counseling on Glycemic Control in Underserved Adults with Type 2 Diabetes

Team

- Principal Investigator: Courtney Moore MS RD
- Supervisor: Dr. Sarah Adler Chief of Clinical Nutrition Ashfield Healthcare
- IRB Approval: October 2025

Rationale

Standard medical nutrition therapy does not adequately account for cultural food practices, family meal structures, and food security challenges in underserved populations. This study tests culturally adapted counseling.

Eligibility

- Adults 30-75 with Type 2 diabetes (A1C 7.5-11%)
- Self-identified Black or Hispanic ethnicity
- Receiving care at Ashfield Healthcare
- Exclusions: pregnancy, end-stage renal disease, active cancer treatment

Intervention

- 12 individual counseling sessions over 6 months
- Sessions integrate traditional cultural foods into carbohydrate counting
- Family meal assessment and group cooking demonstrations
- Food security screening and resource referral
- Control: standard diabetes nutrition education

Timeline

- Enrollment: November 2025 onward
- Baseline complete: February 2026

- Intervention ends: October 2026
- Pilot data deadline: July 9 2027
- FNCE abstract submission: February 6 2027
