

Patient Medical Summary

Patient	Ian Woodward
Date of birth	1987-01-17
Age	39
Primary care	Dr. Amara Osei
Pharmacy	Long Branch CVS
Visit type	Chronic care review

This summary documents the patient's active conditions, current medications, and the care plan discussed at the most recent visit. It is provided to the patient for his records and to coordinate with the neurology and primary care follow-up schedule. The medication schedule is mirrored in the household tracker coded X08.

Active conditions

Condition	Onset	Status
Chronic migraine	2019	Controlled on prevention
Generalized anxiety	2020	Stable on therapy
Iron-deficiency anemia	2022	Improving, monitored

Current medications

Medication	Dose	Schedule	Indication
Topiramate	50 mg	once daily, morning	migraine prevention
Sumatriptan	50 mg	as needed at onset	acute migraine
Buspirone	10 mg	twice daily (AM and 9 PM)	anxiety
Ferrous sulfate	325 mg	once daily with orange juice	iron-deficiency anemia

Iron is taken once daily with orange juice and the patient waits thirty minutes before coffee to support absorption. Most recent ferritin was 18 ng/mL, improved from a prior low, with hemoglobin 13.5 g/dL.

Vital signs and labs

Measure	Result	Reference	Date
Blood pressure	118/76 mmHg	under 130/80	2026-02-26
Heart rate	68 bpm	60 to 100	2026-02-26
Ferritin	18 ng/mL	30 to 300 (low here)	2026-02-14
Hemoglobin	13.5 g/dL	13.5 to 17.5	2026-02-14
BMI	23.1	18.5 to 24.9	2026-02-26

Care plan

- Continue migraine prevention; track frequency and triggers (stress, skipped meals, poor sleep, fluorescent light).
- Continue anxiety medication twice daily; reinforce sleep, walks in Sligo Creek Park, and choir as supports.
- Continue iron with orange juice; recheck ferritin and hemoglobin at six months.
- Maintain regular meals; the patient has a history of skipping lunch during heavy work weeks.
- Next primary care follow-up scheduled for the autumn cycle.

Follow-up schedule

Provider	Focus	Cadence	Next
Dr. Amara Osei	Chronic care, iron	Every 6 months	2026-10-12
Dr. Karen Walsh	Migraine prevention	Annual	2027-07-14
Dentist	Routine	Every 6 months	2026-11-20

Notes for the patient

Bring the medication tracker and any headache log to the next visit. Migraines remain most frequent on Monday mornings and teaching nights; preventive medication has reduced frequency substantially. Report any new visual symptoms or headaches that differ from the usual pattern. This summary is for personal coordination and does not replace direct clinical advice from the care team.

Reviewed and provided by Dr. Amara Osei, Lakecrest Family Medicine, Silver Spring.

Preventive care record

Service	Last done	Result or note	Next due
Annual physical	2026-02-26	Within normal limits	Autumn cycle
Iron studies	2026-02-14	Improving, monitored	Six month recheck
Dental exam	2026-01-15	Routine cleaning	2026-11-20
Vision	2025-11-10	Stable	Annual

Immunizations

- Seasonal influenza vaccine on record for the prior autumn.
- Tetanus booster current.
- Other vaccines reviewed and up to date.

Patient instructions

Keep a steady medication routine, eat regular meals even on busy days, and bring any headache log to the next visit. Call the office for new or changing symptoms. This record is provided for personal coordination and shared with the neurology team for continuity (see P06).
