CLINICAL VISIT SUMMARY

Patient Name:	Jesse Page	Date of Visit:	October 14, 2025
Date of Birth:	December 14, 1990	Prepared:	October 14, 2025
Address:	147 Wythe Ave, Apt 3B Brooklyn, NY 11249	Provider:	Dr. Michael Osei, DDS
Phone:	(718) 555-0143	Specialty:	General Dentistry
		Insurance:	Oscar Health
		Policy No:	MKT-HLT-JP-2025-4491

Procedure

Routine dental examination and prophylaxis (cleaning). Full periapical radiographic series.

Radiographic Findings

Full periapical series obtained and reviewed. No caries (cavities) identified. No periapical pathology. Bone levels within normal limits. No significant radiographic findings.

Clinical Examination Findings

Periodontal health is good. Gingival tissues are firm and pink with minimal bleeding on probing. Probing depths within normal limits. No mobility noted.

Mild incisal wear observed on lower anterior teeth (mandibular incisors). Pattern is consistent with an occasional pen-chewing or pencil-biting habit. No significant occlusal wear beyond this. Dentition is fully intact. Existing restorations are stable.

Prophylaxis

Full mouth prophylaxis completed. Light supragingival tartar (calculus) removed from mandibular anterior region. Teeth polished. Patient's home care is good overall.

Recommendations

1. Continue twice-daily brushing with fluoride toothpaste and daily flossing.
2. Patient advised to be mindful of pen-chewing habit to prevent further incisal wear.

3. Consider a custom-fitted night guard if patient notices any symptoms of nocturnal grinding (bruxism), such as morning jaw soreness or headaches.
4. No restorative treatment required at this time.

Next Appointment

Routine examination and cleaning recommended in approximately 12 months. Patient should schedule their next appointment for October 2026.
