Jesse, the install dates are firm. Gallery turnover starts December 7. We have the cases the week of December 7 to 11, with the opening on December 5 - I meant the cases will be in place before that, but the crew is yours December 7 to 11 for final placement and label checks. Can you commit to having all six panels at the museum by December 4? I will have two preparators and the mount hardware on site.

Let me know the crating spec so I can confirm with the courier.

Elena, December 4 is achievable. Panel 4 warp repair completes end of February, 5 and 6 are on track for October. Final mounting for all six in November. I will deliver the crating spec this week.

Crating: six individual crates, custom foam interior, climate-stable ply exterior, each panel face-up on a padded tray. FedEx specialty handling, not freight. I will coordinate the pickup window for December 1 to 3.

Environmental spec: please confirm gallery RH is stabilized to 48-52 percent before delivery. I will send the written spec separately.

Perfect. I will forward your crating spec to the registrar and courier. RH in that gallery runs 50-54 percent. I can get it tightened to your range for the install. Looking forward to seeing them up.
