

Cumberland Rheumatology Associates

After-Visit Summary

Field	Detail
Patient	John Martin
Date of birth	November 12, 1975
Medical record number	04571192
Date of visit	February 18, 2026
Provider	Dr. Yolanda Harper
Reason for visit	Rheumatoid arthritis follow-up

Vitals

Blood pressure 128 over 80. Pulse 70. Weight stable. No acute distress.

Assessment

Moderate rheumatoid arthritis affecting the hands, wrists, and knees. The patient reports morning stiffness lasting about 45 to 50 minutes, with intermittent swelling. Disease activity is stable on the current regimen compared with the prior visit.

Current medications

Methotrexate 15 mg by mouth once weekly on Saturdays. Folic acid 1 mg daily on every day except the methotrexate day. Hydroxychloroquine 200 mg daily.

Laboratory review

Complete blood count and liver panel drawn February 16, 2026 were within normal limits. Methotrexate is well tolerated at the current dose.

Plan

Continue the current regimen. If the methotrexate response plateaus, the addition of a biologic injectable medication will be discussed. Continue gentle hand exercises twice daily, stay current on labs, and report any new joint swelling or persistent fever.

Next appointment

December 10, 2026 at 10:30 AM. Please complete fasting labs in the week before the visit.
