

Birmingham Sleep and Pulmonary Associates

1201 11th Ave S, Suite 300, Birmingham AL 35205 | (205) 555-0234 | Fax: (205) 555-0235

Dr. Lisa Cho, MD, FCCP, DABSM | Dr. Robert Tatum, MD, FCCP

Office Visit Notes - CPAP Compliance Follow-Up

Patient Name: Anthony J. Hicks
Date of Birth: November 14, 1972 (Age 53)
MRN: BSP-3847
Date of Service: January 14, 2026
Provider: Dr. Lisa Cho, MD, FCCP, DABSM
Visit Type: CPAP Compliance Follow-Up (every 6 to 9 months)
Insurance: BCBS AL, Group RFS-28471, Member ID AHI-38471
Copay Collected: \$50.00 (specialist copay)
Referring Provider: Dr. Warren Stubbs, MD, Irondale Family Practice

Sleep Apnea History

Diagnosis: Obstructive Sleep Apnea (OSA), moderate
Diagnosis Date: October 2021
Diagnostic Study: In-lab polysomnography, October 15, 2021 at BSPA
Baseline AHI (untreated): 22.0 events/hour (moderate OSA)
CPAP Start Date: November 2021
Device: ResMed AirSense 11 AutoSet
Mask: ResMed P30i Nasal Pillow
Supplies Provider: Restwell Medical Supply, account RSTR-28471

CPAP Data Review - myAir 90-Day Window

Data Platform: ResMed myAir cloud portal
Review Period: October 15, 2025 to January 13, 2026 (90 days)
Total Nights in Period: 90
Nights CPAP Used: 84 nights (93.3%)
Nights Not Used (missed): 6 nights
Average Nightly Usage: 6 hours 48 minutes
AHI on Therapy: 3.2 events/hour (EXCELLENT - target below 5)
Average Mask Leak Rate: 6.2 L/min (ACCEPTABLE - target below 24 L/min)
Pressure Range (auto-adjusting): 8 to 12 cmH2O
Pressure 95th Percentile: 11.4 cmH2O
DOT Compliance Status: MEETS DOT REQUIREMENTS (4 hrs/night on 70% of nights)

Assessment, Plan and Next Appointment - January 14, 2026

Clinical Assessment

CPAP therapy is working very well. AHI of 3.2 events/hour is well-controlled, significantly below the therapeutic target of 5 events/hour. Compliance at 93.3% over the 90-day window is excellent and far exceeds the DOT minimum requirement of 70% nights at 4 hours or more.

Mask leak rate of 6.2 L/min is well within the acceptable range (below 24 L/min). This suggests the ResMed P30i nasal pillow is fitting well and the patient is following cushion replacement schedule. Patient reports cushion is being replaced per Restwell Medical Supply schedule.

Patient reports subjectively improved morning alertness compared to pre-CPAP baseline. He states he no longer experiences the severe morning headaches that prompted the initial sleep study in 2021. He reports occasional mild nasal congestion but tolerates the nasal pillow mask well.

No titration changes are recommended at this time. AutoSet algorithm is managing pressure effectively within the 8 to 12 cmH₂O range. 95th percentile pressure of 11.4 cmH₂O is appropriate.

Treatment Plan

CPAP Therapy:	Continue current settings: AutoSet 8 to 12 cmH ₂ O, ResMed P30i nasal pillow
Supplies:	Continue Restwell Medical Supply auto-ship. Replace cushion every 2 weeks, tubing quarterly.
Monitoring:	Continue myAir daily tracking. Print 90-day report for each follow-up visit.
DOT Requirement:	Patient must bring myAir report to each DOT physical examination.
Humidity:	ClimateLine heated tubing and humidity set to Auto - continue as is.
Travel:	Ensure distilled water available when traveling. International adapter on file if needed.

Next Appointment

Next Follow-Up Scheduled:	October 29, 2026
Visit Type:	CPAP Compliance Follow-Up (6 to 9 month interval)
What to Bring:	Printed myAir 90-day report from ResMed app or portal
To Schedule:	Call (205) 555-0234 or use online portal

Important Note for Patient

Per FMCSA regulations, commercial truck drivers with a diagnosis of obstructive sleep apnea must demonstrate CPAP compliance at each annual DOT physical. Your current compliance data exceeds all requirements. Continue current therapy without interruption to maintain DOT medical certification eligibility. If you experience any mask issues, contact Restwell Medical Supply or call our office immediately - do not go without CPAP.

Electronically Signed:	Dr. Lisa Cho, MD, FCCP, DABSM
Date:	January 14, 2026
NPI:	1283749012

Sleep Apnea Background and Therapy Progress

What Is Obstructive Sleep Apnea?

Obstructive sleep apnea (OSA) is a condition in which the upper airway collapses repeatedly during sleep, causing breathing to stop (apnea) or become very shallow (hypopnea). These events reduce oxygen levels and disrupt sleep architecture, leading to daytime sleepiness, cognitive impairment, and increased cardiovascular risk.

Mr. Hicks was diagnosed with moderate OSA with a baseline AHI of 22.0 events/hour in October 2021. With effective CPAP therapy, his current reduction in apnea-hypopnea events - an excellent therapeutic response.

Therapy Progress Over Time

Visit Date	AHI on Therapy	Compliance %	Avg Use (hrs)	Pressure (cmH2O)
Apr 2022	7.8 events/hr	78%	5h 42m	8-14
Oct 2022	5.9 events/hr	85%	6h 15m	8-13
May 2023	4.8 events/hr	88%	6h 30m	8-12
Nov 2023	4.1 events/hr	90%	6h 44m	8-12
Jul 2024	3.8 events/hr	91%	6h 51m	8-12
Jan 2026	3.2 events/hr	93%	6h 48m	8-12

Current visit (Jan 2026) shown in green. Therapy trajectory: consistently improving.
