

Garage Bookshelf, Cut List

Personal woodworking project. The half finished one staring at me every time I park the van.

Project

Simple five shelf bookcase, 72 inches tall, 30 inches wide, 11 inches deep. Pine boards, pocket screws, wood glue, finished with a walnut stain to match the living room shelf. Built from clearance 1x12 boards I have been hoarding for exactly this.

Cut List

Part	Material	Qty	Length
Sides	1x12 pine	2	72 in
Top and Bottom	1x12 pine	2	28.5 in
Fixed Shelves	1x12 pine	4	28.5 in
Back Panel	quarter inch ply	1	72 x 30 in
Toe Kick	1x4 pine	1	28.5 in

Hardware

Pocket screws, 1.25 inch. Wood glue. Eight shelf pins. Four corner braces for the back. Walnut stain and a foam brush. Sandpaper, 120 and 220 grit.

Steps Left

1. Cut all pieces and label the back of each.
 2. Sand everything to 220 grit.
 3. Pocket hole the sides into the top and bottom.
 4. Glue and screw the carcass, check it is square.
 5. Set the fixed shelves at marked heights.
 6. Nail the back panel to lock it square.
 7. Attach the toe kick.
 8. Two coats of walnut stain, let it cure in the garage.
- Finish this one before starting the planter box. One project at a time, or it all stays half done forever.
