Height	5 ft 10 in	
Weight	172 lb	
BMI	24.7	Normal
O2 saturation	98%	Normal
Peak flow	590 L/min	Good control

Assessment

Mr. Rodriguez is a 27 year old male presenting for routine annual examination. He is active, runs regularly, and works long hours on his feet as a chef. Overall health is excellent. Mild persistent asthma remains well controlled. He reports rescue inhaler use one to two times per week during spring pollen season and with intense exertion. Lung function testing today is good and unchanged from prior. No daily controller inhaler is indicated at this time. Seasonal allergic rhinitis is managed with daily cetirizine.

Plan

Continue albuterol rescue inhaler as needed. Continue cetirizine 10 mg daily during allergy season. Encourage continued cardiovascular exercise and hydration. Routine labs ordered, results to portal, all within normal limits. Return for next annual physical on January 15, 2027, or sooner if symptoms change.
