Seasonal Maintenance and Inspection Checklist

Customer guide from Hayes Auto Works. Prepared by David Hayes.

Seasonal Maintenance and Inspection Checklist

Customer facing guide from Hayes Auto Works. Use this to keep your vehicle safe through a Michigan winter. Prepared by David Hayes, November 2025.

Why It Matters

Dearborn winters are hard on batteries, tires, and brakes. A short inspection in the fall prevents the roadside trouble we see every January. Bring your vehicle in and we will walk the list with you.

Battery and Charging

- Load test the battery and clean the terminals.
- Check charging output under load.
- Replace a battery that tests weak before the first hard freeze.

Tires and Traction

- Measure tread depth on all four tires.
- Set cold tire pressure to the door placard value.
- Rotate tires and inspect for uneven wear.
- Recommend a dedicated winter set for daily drivers.

Brakes

- Measure pad thickness and inspect rotors.
- Test brake fluid for moisture and flush if needed.
- Check parking brake hold on an incline.

Fluids

Engine oil	Use the correct 5W-30 grade and reset the service light.
Coolant	Test freeze protection to minus 30 F.
Washer fluid	Fill with winter rated fluid.
Transmission	Check level and condition on a warm engine.

Visibility and Lights

- Replace worn wiper blades.
- Confirm all exterior lights work.
- Check the defroster and cabin heater.

Under the Hood

- Inspect belts and hoses for cracks.
- Check the air filter and replace if dirty.
- Look for leaks at the water pump and hoses.

What It Costs

The multi point winter inspection is 0 dollars for customers who book any service the same visit, and 45 dollars on its own. We do free inspections for single mothers twice a year as a thank you to the neighborhood.

Book Your Inspection

Call the shop or stop by. Hours are Monday to Friday 8 to 6 and Saturday 8 to 2. We will have you in and out and back on the road for winter.

Shop	Hayes Auto Works
Address	6847 Warren Ave, East Dearborn, MI 48126
