Allergy and Anaphylaxis Action Plan

Reviewed	January 22, 2026
Patient	Valentina Robles
Date of Birth	March 4, 2009
Allergen	Shellfish, crustaceans and mollusks
Weight	128 lb
Provider	Ana Patel, MD
Plan valid through	January 2027

Severe symptoms, give epinephrine now

Trouble breathing, throat tightness, repeated coughing, pale or bluish skin, dizziness, swelling of lips or tongue, or vomiting after exposure. Inject the epinephrine auto injector 0.3 mg into the outer thigh, call 911, and state anaphylaxis. A second dose may be given after 5 minutes if symptoms continue.

Mild symptoms

Itchy mouth, a few hives, mild stomach discomfort. Give cetirizine 10 mg and watch closely. If symptoms spread or involve breathing, use the auto injector.

Prescription	Epinephrine auto injector 0.3 mg, carry two at all times
Antihistamine	Cetirizine 10 mg as needed
Emergency contact	Elizabeth Robles, mother, (305) 555-0118
School on file	Bayshore Academy

Ana Patel, MD. Two auto injectors should be kept with the student and one set at home. Review annually or sooner if weight changes significantly.
