

Pelvic Ultrasound Report

Patient	Heather Cole
Date of birth	March 15, 1996
MRN	TC-4471082
Date of exam	January 8, 2026
Ordering provider	Dr. Samantha Liu, MD
Exam	Transvaginal and transabdominal pelvic ultrasound
Indication	Stage III endometriosis surveillance

Findings

Uterus: anteverted, normal size and contour, measuring 7.8 by 4.6 by 4.1 cm. Endometrial stripe thin and homogeneous at 3 mm, consistent with continuous hormonal suppression.

Right ovary: 3.1 by 2.4 by 2.2 cm. A 2.6 cm endometrioma with homogeneous low-level internal echoes, unchanged compared with the prior study.

Left ovary: 2.8 by 2.0 by 1.9 cm, normal appearance, no new cyst.

No free fluid beyond physiologic. No hydronephrosis on the limited renal views.

Impression

1. Stable right ovarian endometrioma, unchanged from the prior examination. 2. Findings consistent with known Stage III endometriosis on continuous hormonal therapy. No acute change. Routine annual surveillance recommended.

Electronically signed by Priya Nandakumar, MD, Radiology. January 8, 2026.
