

After Visit Summary

Patient	Heather Cole
Date of birth	March 15, 1996
Visit date	January 12, 2026
Reason for visit	Endometriosis follow-up, semi-annual
Blood pressure	112/70
Weight	139 lb

Assessment

Stage III endometriosis, stable on current regimen. January 8, 2026 pelvic ultrasound shows a stable right endometrioma with no new findings. Patient reports two to three high-pain days per cycle, managed with her current plan.

Current medications

Medication	Dose	Instructions
Dienogest	2 mg	One tablet by mouth daily, continuous
Naproxen	500 mg	As needed for breakthrough pain, max 2 per day
Vitamin D3	2000 IU	Once daily
Magnesium glycinate	400 mg	Once nightly
Omega-3 fish oil	1200 mg	Once daily
Iron	325 mg	As needed after heavy bleeding

Plan

Continue current therapy. Maintain pelvic floor home program. Continue symptom tracking. Discussed second laparoscopy as an option if symptoms escalate. Next follow-up and annual ultrasound scheduled for January 14, 2027. Call sooner for escalating or new symptoms.
