

Ridgeline Systems - Employee On-Call Policies

Section 4.2: Engineering Team On-Call Rotation Rules

Overview: The Ridgeline Systems cloud infrastructure platform requires 24/7 engineering availability. Production issues are triaged by the automated alerting systems and routed to the primary on-call engineer.

Rotation Cadence: Engineers are placed in a four-week rotation cycle. A standard rotation week starts on Monday at 9:00 AM and concludes the following Monday at 9:00 AM.

Responsibilities: Primary on-call engineers must acknowledge critical PagerDuty alerts within 15 minutes. If an alert is unacknowledged, it escalates to the secondary on-call engineer and then to Marcus Chen (Engineering Team Lead) or other team leads.

Compensation: Standard weekly rotation stipend is applied to the subsequent payroll period.

Effective Date: August 1, 2025.
