

East Grove Organic Conversion Dossier

Parcels E-1 Este Llano, E-2 Este Ladera, E-3 Este Arroyo, Year 2 of a 3-year EU organic transition

1. Purpose and scope

This dossier consolidates the organic-conversion record for the east grove of Finca Miles. It is the narrative companion to the field diary held in workbook X03 and the harvest position reported in PDF P01. It is prepared for the EU organic control body and for the Cooperativa Oleicola Sierra Morena organic-fruit committee. The three east parcels (E-1, E-2, E-3) total 12 hectares of Picual and Hojiblanca under conversion; certification is targeted for the first quarter of 2027 once the 36-month conversion period closes.

2. Parcel register

Parcel	Name	Variety	Area (ha)	Trees	Conversion start	Status
E-1	Este Llano	Picual	5.0	1,060	2024-11-01	Yr 2 in-conversion
E-2	Este Ladera	Hojiblanca	4.0	past	2024-11-01	Yr 2 in-conversion
E-3	Este Arroyo	Picual	3.0	past	2024-11-01	Yr 2 in-conversion
Total	East grove	Picual / Hojiblanca	12.0	-	-	-

3. Conversion calendar

The conversion clock began with the documented stop of all non-permitted inputs on 2024-11-01. Year 1 closed clean. Year 2 (the current season, 2025-26) is recorded in full in workbook X03. The 36-month period closes on 2027-10-31, after which east-grove fruit may be marketed as certified organic.

All conversion milestones are evidenced by dated input lines in the field diary.

- Year 1: 2024-11-01 to 2025-10-31, baseline, soil sampling, buffer establishment.
- Year 2: 2025-11-01 to 2026-10-31, current; cover cropping and copper-managed defence.
- Year 3: 2026-11-01 to 2027-10-31, final conversion year; pre-certification audit.
- Certification decision target: first quarter 2027 pack submitted after season close.

4. Input control and the copper ceiling

All plant-protection and fertility inputs on E-1, E-2 and E-3 are drawn from the EU organic permitted list. Copper-based fungicide use is capped at the EU annual ceiling of 4.0 kg Cu per hectare per year, averaged over a rolling five-year window. The running total below is reconciled against the dated input lines in workbook X03.

Parcel	Cu applied (kg/ha, season)	Annual ceiling (kg/ha)	Headroom (kg/ha)
E-1	2.4	4.0	1.6
E-2	2.1	4.0	1.9
E-3	2.6	4.0	1.4

5. Cover cropping and soil health

A vetch-faba-mustard mix (batch SEM-VF-2511) was sown between rows on 2026-01-14 by Pedro Serrano, as logged in X03. The cover crop fixes nitrogen, suppresses winter erosion on the Ladera slope, and feeds the soil biology that the conversion depends on. Professor Maria Castillo (Escuela Superior Agraria de Cordoba) advises on the cover-crop programme and reviews the annual soil-health panel.

6. Buffer zones and contamination control

Each east parcel carries a documented buffer against the conventional north grove and the neighbouring almond ground managed by David Miles. Buffer rows are harvested and milled separately and their fruit is kept out of the organic stream. Spray-drift records, shared-equipment cleaning logs, and the separate-milling schedule are retained with X03.

7. Separation of harvest streams

East-grove in-conversion fruit is kept apart from cooperative-pool fruit and from the premium Miles-label stream at every stage: picking crates, transport, mill scheduling, and storage tanks. The flagship premium lot MIL-2526-006 is documented separately in the Certificate of Analysis (PDF P03) and quality tracker (workbook X08); it is not an organic-stream lot and is listed here only to confirm stream separation.

8. Records retained for audit

- Field diary with dated input lines, rates, batch lots, and operator, workbook X03.
- Copper running total reconciled to the 4.0 kg/ha annual ceiling, this dossier, section 4.
- Cover-crop seed certificate and batch SEM-VF-2511 delivery note.
- Buffer-zone map and separate-milling schedule for east-grove fruit.
- Cooperative organic-fruit committee correspondence, see meeting pack PDF P06.
- Soil-health panel results and agronomist review notes (Prof. Maria Castillo).

9. Open items before the Year 3 audit

Item	Owner	Target date	Status
Confirm five-year copper average under ceiling	Min Miles Park	2026-11-15	On track
Renew cover-crop seed for Year 3	Pedro Serrano	2026-10-30	Ordered
Soil-health re-test, all three parcels	Prof. M. Castillo	2026-11-20	Scheduled
Pre-certification document review	Min Miles Park	2027-01-15	Pending

10. Field-diary input summary (extract from X03)

The lines below are an extract from the East Grove Organic Field Diary (workbook X03) for the current season. Every input is drawn from the EU organic permitted list and carries a batch lot and named operator. The full diary holds the complete dated record.

Date	Parcel	Operation	Input product	Rate	EU ok	Operator
2026-01-14	E-1	Cover crop sowing	Vetch-faba-mustard mix	35 kg/ha	Y	Pedro Serrano
2026-01-14	E-3	Cover crop sowing	Vetch-faba-mustard mix	35 kg/ha	Y	Pedro Serrano
2025-11-26	E-2	Foliar nutrition	Seaweed extract	3 L/ha	Y	Pedro Serrano
2025-12-03	E-1	Disease defence	Copper hydroxide	1.2 kg/ha	Y	Min Miles Park
2025-12-03	E-3	Disease defence	Copper hydroxide	1.3 kg/ha	Y	Min Miles Park
2026-02-09	E-2	Weed management	Mechanical, inter-row	-	Y	Pedro Serrano

11. Sign-off

This dossier is a true summary of the east-grove conversion record for season 2025-26 to the best of the producer's knowledge, and is consistent with the dated entries in workbook X03.

Prepared by Min Miles Park, Finca Miles. Cross-references: workbook X03 (field diary), PDF P01 (harvest position), PDF P06 (cooperative meeting pack), workbook X08 and PDF P03 (flagship quality).
