Endocrinology Quarterly Visit Summary

Patient: Tony Michael Nguyen Sr.
Date of Birth: December 14, 1954
Visit Date: February 9, 2026
Physician: Dr. Kevin Owens, MD
Next Scheduled Visit: November 12, 2026

Glycemic Control Summary

Measure	Current Value	Target	Trend
HbA1c	7.2%	Below 7.0%	Stable, above target
Fasting Glucose (self-reported range)	110 to 145 mg/dL	Below 120 mg/dL	Slightly elevated on weekends
Post-prandial Glucose (estimated)	150 to 180 mg/dL	Below 180 mg/dL	Acceptable
Body Weight	183 lbs	Stable	Unchanged from prior visit

Clinical Notes

Mr. Nguyen presents in good general condition. His HbA1c of 7.2% remains marginally above target. Review of his glucose logbook shows that Sunday readings are consistently higher, likely reflecting family Sunday lunch. He is carbohydrate-aware and compliant with Metformin. No hypoglycemic episodes have been reported. Kidney function from the February 12 annual physical (eGFR 74) is within the acceptable range for continued Metformin use.

Bilateral cataract surgeries in December 2025 and January 2026 have been completed. No ophthalmology concerns were reported at this visit. Annual diabetic retinopathy screening is due in October 2026.

Mild bilateral toe neuropathy noted as stable. Podiatry follow-up is scheduled for December 2026.

Medication Review

Medication	Dose	Frequency	Status
Metformin	1000 mg	Twice daily (morning and evening with meals)	Continued, no change
Vitamin D	2000 IU	Once daily	Continued
Daily Multivitamin	Standard	Once daily	Continued

Plan

1. Continue Metformin 1000mg twice daily. No dose adjustment at this time.
2. Increase dietary monitoring of carbohydrates, with particular attention to Sunday meals. Patient has been counseled.
3. Continue daily Vitamin D 2000 IU.
4. Annual diabetic retinopathy screening to be scheduled for October 2026.
5. Return for quarterly follow-up on November 12, 2026 at 2:30 PM at Capital Endocrine Associates.
