

Oyster Lease - Rack and Bag Inventory and Grading

Bayshore Sustainable Aquaculture | Tidal lease, permitted area | Count date Jan 16, 2026

Quarterly count of the rack-and-bag inventory on the tidal lease. Bags are sampled at one in ten, graded by the mesh ladder, and projected to market window. Eastern oyster, single-set on micro-cultch.

Standing inventory by grade

Grade	Shell height	Bags	Est. count	Market window
Seed	< 25 mm	140	42,000	Dec 2026+
Grower	25-50 mm	96	26,500	Oct - Nov 2026
Pre-market	50-70 mm	61	15,800	Feb 2026
Market (select)	70-90 mm	44	11,200	Now - Feb 2026
Cull / mortality	-	-	approx. 6%	-

Field observations

- Fouling load light this quarter; one desiccation air-dry cycle held the mudworm down.
- Set from last fall is filling out well on the mid-tide racks. Low-tide racks lag about three weeks, as usual.
- Two bags on rack line 3 showed a cluster of boring sponge. Pulled and culled to keep it from spreading.
- Salinity on the lease ran 14-19 ppt this quarter, inside the band oysters like for meat condition.

Market-grade stock covers The Boathouse standing order through February. Recommend stepping up the grading cadence to monthly once the spring demand climbs.

Lease inventory record. Counts support the TPWD reporting file and the restaurant supply forecast.
