Clinical Notes Summary

Examination findings: No caries (cavities) detected. Gingival tissue healthy; no bleeding on probing. Occlusion normal. No signs of bruxism or TMJ dysfunction. Full-mouth bitewing X-rays reviewed; no interproximal decay identified. Oral hygiene assessment: good technique, light buildup along lower lingual anteriors - discussed flossing adjustment.

Next Recommended Visit:	November 2026 (routine cleaning and exam)
Home Care Recommendations:	Continue twice-daily brushing, daily flossing; water flossing as supplement if needed.
