Patient Instructions, Vitamin D Supplementation

Patient	Maria Sandoval
Provider	Amy Nelson, MD
Date	February 12, 2026
Reason	Vitamin D, 25 OH level of 22 ng/mL (low)

Your Instructions

- Take Vitamin D3 (cholecalciferol) 2,000 IU by mouth once daily.
- Take it with a meal that contains some fat, which helps absorption. Breakfast with your morning coffee is fine.
- This is available over the counter. No prescription is needed.
- Continue daily for at least 6 months, then we will recheck your level.
- A short daily walk outdoors also helps, which fits your routine well.

Why This Matters

Low Vitamin D is very common, especially through Michigan winters. It can contribute to fatigue and affects bone health. Correcting it is simple and low risk at this dose.

Follow Up

Recheck Vitamin D level around October 2026. Call the office at (313) 555-0682 with any questions or if you notice no improvement in energy. This guidance is general and not a substitute for an in person visit if new symptoms arise.
