CYCLE 1 BASELINE MONITORING SCHEDULE — PATIENT COPY

Patient	Sarah Henderson	DOB	1994-03-08
Partner	Brian Henderson	DOB	1996-11-12
File Number	BIVF-2026-HEND-001	Attending	Dr. James Cooper, MD, MSCE
Nurse Coordinator	Jenna Martinez, RN	Nurse Cell	(617) 555-0201
Cycle Number	1 (first attempt)	Protocol	Standard antagonist
Printout Prepared	2026-02-18	Prepared By	Boston IVF Administrative Services

1. BASELINE MONITORING SCHEDULE

The following schedule assumes standard antagonist protocol timing and reflects the cycle 1 plan agreed with Dr. Cooper at the February 2026 consult. Baseline monitoring day 1 initiates the monitored phase; the patient reports to the Waltham office by 8:00 AM for transvaginal ultrasound and phlebotomy (estradiol, LH, progesterone). Suppression must be confirmed before stim medications are dispensed.

Cycle Day	Date	Appointment	Location	Prep Instructions
Baseline day 1	Tuesday, October 20, 2026	TVUS + labs (E2, LH, Prog)	Waltham office	arrive 7:45 AM, fasted not required
Baseline day 2 (if needed)	Thursday, October 22, 2026	TVUS follow-up	Waltham office	only if day 1 borderline
Stim day 1	Monday, October 26, 2026	begin Gonal-F 225 IU + Menopur 75 IU home injection	home injection	review reconstitution steps
Stim day 6	Saturday, October 31, 2026	add Ganirelix 250 mcg SC	home injection	morning dose
Stim monitor 1	Monday, November 2, 2026	TVUS + E2 + LH	Waltham office	arrive 7:45 AM
Stim monitor 2	Thursday, November 5, 2026	TVUS + E2 + LH	Waltham office	arrive 7:45 AM
Trigger day (est.)	Sunday, November 8, 2026	Lupron or Ovidrel trigger	home injection	exact time set at monitor 2
Retrieval (est.)	Tuesday, November 10, 2026	oocyte retrieval, IV sedation	Waltham surgical suite	NPO after midnight prior
Post-retrieval day 5	Sunday, November 15, 2026	blastocyst grading, freeze all if PGT-A	clinic notification only	no patient visit
First transfer	Approximately Feb 15, 2027	FET single embryo transfer	Waltham office	Prometrium 200 mg TID begins day of transfer

2. MEDICATION SCHEDULE (STIM PHASE)

Medications listed below are prescribed as of the February 2026 consult. Dosing may adjust based on baseline and stim monitor labs. Please coordinate all medication pickups with the Boston IVF pharmacy partner and confirm receipt at least 48 hours before stim day 1.

Medication	Dose	Route	Timing	Duration
Gonal-F	225 IU	SC	evening	stim day 1 through trigger
Menopur	75 IU	SC	evening	stim day 1 through trigger
Ganirelix acetate	250 mcg	SC	morning	stim day 6 through trigger
Lupron trigger OR Ovidrel	4 mg / 250 mcg	SC	per Dr. Cooper's timing	single dose
Prometrium	200 mg	PV	TID	starting transfer day, through 10-week gestational milestone

Page 1 of 2 — this printout was prepared by Boston IVF Administrative Services on 2026-02-18 as a companion to the February 2026 intake summary. Dates listed above are the originally-scheduled cycle 1 baseline dates and are subject to change per Dr. Cooper's clinical judgement. Please refer to weekly nurse coordinator communications for the most current schedule.

3. INSURANCE AND FINANCIAL SUMMARY

Windbridge Partners employer-sponsored plan carries a lifetime fertility benefit cap of \$25,000. Diagnostics and monitoring visits count against the cap. Cycle 1 all-in cost is estimated at \$18,000 to \$25,000 depending on medication response. Please review the financial packet in your patient portal for the full breakdown.

Component	Cost Range (USD)	Insurance Coverage	Est. Patient Responsibility
Per-cycle procedure (retrieval, lab, transfer)	\$15,000 – \$20,000	Windbridge partial to \$25K cap	\$0 – \$200 cycle 1 with cap
Medications (Gonal-F, Menopur, Ganirelix, trigger shot, Progesterone)	\$3,000 – \$5,000	not covered by Sarah's ACA plan	full patient responsibility unless cap remaining
Cryopreservation year 1 (if freeze-all)	\$600 – \$800	not covered	full patient responsibility
PGT-A testing (optional)	\$3,500 – \$5,500	not covered	decision pending Brian & Sarah discussion
Estimated cycle 1 total	\$18,000 – \$25,000	Windbridge to \$25K lifetime cap	cap applies once against cycle 1

4. PATIENT INSTRUCTIONS AND CLINIC COMMUNICATION

The patient portal at bostonivf.mychart.com is the primary channel for lab result posting and secure clinical messaging. Weekly nurse coordinator check-ins are scheduled every Friday at 10:00 AM via Zoom with Jenna Martinez, RN. Please prepare any questions in advance and log them into the shared portal document titled Cycle 1 Q&A.;

For time-sensitive clinical concerns during business hours (Mon-Fri 8 AM to 5 PM), call the nurse coordinator line at (617) 555-0201. After hours, please call the main office line at (617) 555-0198 and follow the on-call prompts.

5. IMPORTANT NOTES

- Cycle 1 begins with baseline monitoring on Tuesday, October 20, 2026. This is the anchor date for all downstream scheduling.
- Please arrange transportation for the day of retrieval; IV sedation precludes driving for 12 hours post-procedure.
- The partner (Brian Henderson) should plan to attend the retrieval day for support and to provide the semen sample within the required timing window.
- Sarah's freelance work schedule should account for a 10 to 14 day light-load window during the stim phase and around retrieval.
- Any change to the schedule above will be communicated in writing via the patient portal and confirmed on the following Friday nurse coordinator call.
- This printout is prepared as of February 2026. If subsequent clinical decisions require a schedule adjustment, the most recent written communication from the clinic team supersedes this printout.

Signature acknowledgement: By retaining this printout, the patient acknowledges receipt of the cycle 1 baseline schedule as prepared February 18, 2026. Signatures on file in patient chart.
