Capacity planning • Typeform + Eventbrite reconciliation

Registration Overflow Projection

Notion page: Holiday Celebration 2026 / Capacity Planning / Registration Overflow **Author:** Matt Coleman **Last updated:** 2026-12-05 6:55 AM **Status:** Working draft. Numbers may shift after final Dec 6 reconciliation pass. **Tags:** #capacity #pre-council-briefing #dec-8-meeting

The Question

Do we have the space, the chairs, the food, and the volunteer coverage for the actual number of people coming Saturday, or do we have those things for the number the committee planned for in September (175)?

Raw Registration Sources

Typeform (typeform_event_registrations.csv)

- Total unique registration responses: **160** (TF-R-001 through TF-R-160)
- Party size distribution (approximate):
- Party of 1: ~100 responses → ~100 heads - Party of 2: ~45 responses → ~90 heads - Party of 3: ~10 responses → ~30 heads - Party of 4: ~5 responses → ~20 heads
- **Party-size-weighted Typeform headcount: ~240 heads before adjustments**

Eventbrite (eventbrite_registrations.csv)

- Total unique orders: **74** (EB-001 through EB-074)
- Ticket types: General Admission and Family Pass
- Quantity per order: 1 through 4
- **Party-size-weighted Eventbrite headcount before dedup: ~140 heads**

Paper Sign-up Sheet (fellowship hall bulletin board)

- Additional names collected after Sunday service (Rosa maintains): ~20 additional heads
- Overlap with online registration: unknown but likely significant

The Duplication Problem

Rosa set up Eventbrite in mid-October as a backup channel for people who prefer it or who do not want to fill out a Typeform. This means a large share of Eventbrite orders correspond to the same households as Typeform responses.

Rough last-name overlap between the two lists: **estimated 60 to 70 percent**. Rigorous dedup has not been completed as of Dec 5. Tag: [unverified].

The Confidence-Weighted Point Estimate

Applying:

- 10% no-show adjustment against Typeform party-size total (historical rate at Grace Community events)

- Treating Eventbrite net-new above Typeform as ~0 for planning purposes (65% overlap assumption absorbs most orders)
- Treating paper sign-up as walk-in intent rather than confirmed attendance

Point estimate for planning: ~215 attending heads.

This matches Rosa's independent count from the physical sign-up sheet on Dec 4.

The Gap

- Seating capacity confirmed with El Paso Party Rentals: **175 chairs** (VND-004)
- Point estimate of Saturday attendance: **215 heads**
- **Gap: 40 heads beyond 175-chair capacity**

What Breaks at 215

1. **Chairs.** 40 people without a seat unless additional chairs rented (call to EPR required, 72-hour advance notice).
2. **Food.** Elena's confirmed quote (\$3,400) covers the expanded menu with a small buffer around 175 to 190. Above 190, need her per-plate overflow add-on at approximately \$20 per additional plate above the base. Elena needs greenlight by Dec 6.
3. **Paper goods.** Sam's Club run planned for 175. Matt will add ~50 units of each item as a hedge.
4. **Parking.** Two confirmed parking volunteers (Gabe Soto, Roy Gutierrez). Overflow street parking on Alameda has historically absorbed.
5. **Wellness booth.** Booth planning at ~200 walk-through volume was already tight. At 215 the booth will be busy but manageable with timed-slot triage.

Options for the Council

1. **Absorb the overflow.** Authorize Elena's per-plate add-on (~\$20/plate) for the estimated overflow of ~40 attendees. Authorize additional chair rental with EPR (~40 chairs). These are incremental spend beyond the reconciled \$6,610 obligation and require the council to approve the money.
2. **Cap the celebration.** Close registration Sunday. Communicate first-come first-seated.
3. **Split the difference.** Authorize the additional chairs but not the additional food. Ask attendees to serve smaller portions in the second half of the service.

Matt's recommendation: **Option 1**, contingent on the council resolving the \$1,760 reconciled shortfall first. If the money is not there, Option 3.

Confidence Notes

- The 215 estimate assumes no significant Typeform no-shows beyond ~10% historical baseline. Poor weather Saturday could pull actual attendance to 190 to 200.
- The 215 estimate does not adjust for Mailchimp-driven walk-in traffic (42% open rate on the Nov 10 send). Historical walk-in rate at Grace Community events is roughly 5 to 10 percent above registered.
- The 215 estimate should be reconciled against a rigorous last-name overlap analysis between Typeform and Eventbrite by Dec 6. Matt has not completed this pass yet. Tag: [unverified] on the exact number until then.
