

GBMC Orthopedics and Spine

Nancy OBrien, MD, Orthopedic Spine
Greater Baltimore Medical Center

Home Exercise Program: Lumbar Spine, L4 to L5

Patient: Ryan Mitchell DOB: 11/12/1990

Diagnosis: Herniated disc, L4 to L5, with chronic low back pain

Reviewed: January 2026 MRI showed slight progression from prior study

Daily and twice weekly program

- Pelvic tilts, 2 sets of 10, daily
- Cat and camel, 2 sets of 10, daily
- Knee to chest stretch, hold 20 seconds each side, daily
- Bird dog, 2 sets of 8 each side, twice weekly
- Modified yoga and walking as tolerated, twice weekly
- Avoid heavy lifting and prolonged sitting, change position every 30 minutes

Medication

Ibuprofen 600 mg as needed for pain, with food. Do not exceed label without calling the office.

Plan

We discussed microdiscectomy as an option. Patient is electing to defer surgery at this time due to recovery time and work demands. Continue the home program and reassess.

Next follow up appointment: December 11, 2026.

Questions: call the office at (410) 555-0219.
