

WASATCH PHYSICAL THERAPY
Discharge Summary

Patient: Amanda Hayes

DOB: 01/19/1985

Referring Provider: Nathan Gibbs, MD

Diagnosis: Left L4-L5 disc herniation with radiculopathy (per MRI 04/12/2022)

Episode of Care: May 2, 2022 to July 25, 2022 (12 weeks, 18 visits)

Discharge Date: July 25, 2022

REASON FOR REFERRAL

Low back pain with left leg radiation limiting prolonged sitting, lifting, and the patient's running and skiing activities.

COURSE OF CARE

The patient completed a progressive program of core stabilization, hip and hamstring mobility, nerve glide work, and graded loading. She was consistent with the home exercise program and tolerated progression well.

OUTCOMES

Pain at intake: 6 of 10 with sitting and lifting.

Pain at discharge: 1 to 2 of 10, intermittent.

Oswestry Disability Index improved from 38% to 8%.

She returned to hiking and to a standing-desk work setup.

DISCHARGE RECOMMENDATIONS

1. Continue daily core and stretching routine, especially before long sitting.
2. Use a standing desk at home and at the office.
3. Manage occasional flares with activity modification and ibuprofen.
4. Avoid heavy unsupported lifting. Resume running only if symptom free.
5. Follow up with Dr. Gibbs if symptoms recur or worsen.

Therapist: Mark Reilly, DPT
