

Crestwood Physical Therapy Associates

Progress Summary

Patient: Charles Robert Ferguson

Date of birth: November 12, 1972

Treating therapist: Jake Rosen, PT

Referring physician: Dr. Alan Westbrook, Crestwood Orthopedic Center

Summary date: February 16, 2026

This summary covers physical therapy for a right knee partial meniscus tear confirmed by imaging in December 2025. It is shared with the patient and the referring physician only and is kept confidential.

Background

The patient is an active fifty three year old who stands a full shift on a shop floor and pursues woodturning and coaching. Imaging in December 2025 confirmed a partial meniscus tear of the right knee. A cortisone injection in January 2026 gave meaningful relief. The plan is conservative management with therapy twice weekly.

Treatment schedule

Day	Time	Focus
Tuesday	6:30 AM	Strength and mobility
Thursday	6:30 AM	Balance and loading

Sessions to date

Date	Note
January 13, 2026	Baseline, reduced swelling after injection
January 20, 2026	Range of motion improving
January 29, 2026	Added single leg balance work
February 5, 2026	Tolerating standing longer at work
February 12, 2026	Strength gains, less morning stiffness

Home program

The patient performs a daily home program of quad sets, straight leg raises, and short walks after each session, as recommended by the physician. Walking tolerance has improved over the period. The patient is consistent, which shows in the measurements.

Measurements

Measure	Start	Current
Knee flexion	110 degrees	128 degrees
Single leg stance	8 seconds	22 seconds
Reported pain, standing shift	Moderate	Mild

Assessment and plan

Progress is good and consistent with conservative management. The patient is meeting goals for range of motion and standing tolerance. We will continue twice weekly therapy and the home program and reassess with the referring physician later in the year. If standing tolerance plateaus or pain returns, the physician will weigh further options.

Goals

Restore full pain free standing tolerance for a work shift, return to comfortable lathe work, and rebuild strength for coaching on the field. The patient understands the plan and is on board.

Jake Rosen, PT, Crestwood Physical Therapy Associates.
