Rebecca Holtz, MD, Endocrinology

After Visit Summary

Patient	Steven Foster	Date of birth	01/28/1967
Date of visit	November 17, 2026	Provider	Rebecca Holtz, MD
Reason for visit	Hypothyroidism, six month follow up	Next visit	May 2027

Vitals

Measure	Result	Reference	Prior visit
Blood pressure	122 / 76 mmHg	Under 130 / 80	124 / 78 mmHg
Heart rate	58 bpm	60 – 100	61 bpm
Weight	177 lb	—	178 lb
Body mass index	24.6	18.5 – 24.9	24.7
Temperature	98.1 F	97.0 – 99.0	98.3 F

Laboratory results

Test	Result	Reference range	Flag	Prior (Jan 2026)
TSH	2.10 mIU/L	0.45 – 4.50	Normal	2.30 mIU/L
Free T4	1.20 ng/dL	0.82 – 1.77	Normal	1.18 ng/dL
Free T3	3.10 pg/mL	2.00 – 4.40	Normal	Not drawn
TPO antibody	86 IU/mL	Under 35	High, stable	91 IU/mL
Comprehensive metabolic panel	Within normal limits	—	Normal	Normal

Assessment: primary hypothyroidism, autoimmune, diagnosed 2015. Biochemically euthyroid on the current dose. TSH has been stable across the last three panels and no dose change is indicated at this time.

Medications

Medication	Dose	Directions	Refills
Levothyroxine sodium	75 mcg	One tablet by mouth each morning on an empty stomach, at least 30 minutes before food or coffee	3, 90 day
Cholecalciferol (vitamin D3)	2,000 IU	One capsule daily with the evening meal	OTC
Calcium citrate	600 mg	One tablet daily with the evening meal, separated by at least 4 hours from levothyroxine	OTC
Fish oil	1,000 mg	One capsule daily with the evening meal	OTC

Instructions from Dr. Holtz

Keep taking the tablet at the same time each morning. Separation from calcium matters more than the exact hour, so an early dose with the walk afterward is fine. Do not change brands between refills without telling us, because absorption differs. Repeat TSH and free T4 in six months, sooner if fatigue, cold intolerance, or unexplained weight change returns. Continue the current exercise pattern. Endurance work is not restricted by this condition and the resting heart rate reflects conditioning rather than a thyroid effect.

Care plan and continuity

Monitoring interval	Every six months, TSH with reflex to free T4
Refill cadence	90 day supply, refill check on the 15th of each month
Pharmacy	Hartwell Pharmacy, Sacramento, copay \$30.00 per 90 day fill
If travelling or away	Carry the full supply in original labelled packaging and keep the morning timing, adjusting to local time over two or three days

Coverage note	Confirm pharmacy benefit continuity before any change in employment status, because a lapse would move this fill to full cash price
Allergies	Shellfish, mild, hives. Not anaphylactic. Carries diphenhydramine.
Next appointment	May 2027, scheduling letter to follow

This summary reflects the visit above and is part of your medical record. It is shared only with you and the providers involved in your care. Bring the medication list to every visit.
